

Be Number Smart and Save Money Every Month

Tips for business owners, families, online sellers, entrepreneurs and anyone wanting to save on their monthly phone service.

It's a Smart Phone World

Like most of us, you probably own and extensively use a smart phone. It is the access point that manages your calls, texts, email, business and social world. You take it everywhere you go. It holds your contacts, appointments, photos and has that addicting bird flap game. And it's not cheap. And it's probably

not the only smart phone in your home. So why are you still paying for that unused home landline? Or that expensive business line? Why double-up and pay for another phone service when you have all you need right there in your hand?

You are in Control of Your Phone Number

Most consumers don't know that the phone company doesn't own your phone number. You OWN it. That's right. It's yours to keep. Under the FCC's "local number portability" (LNP) rules, you are legally able to keep your phone number when you move or change phone companies.

You've had that number for years. It's easy to remember and it flows off your tongue. Why give it up when circumstances change? The law allows you to transfer it to another phone service. This process is known as "porting" or Local Number Portability (LNP). That includes your old home phone, pre-paid cell phone, old business line or cell service.

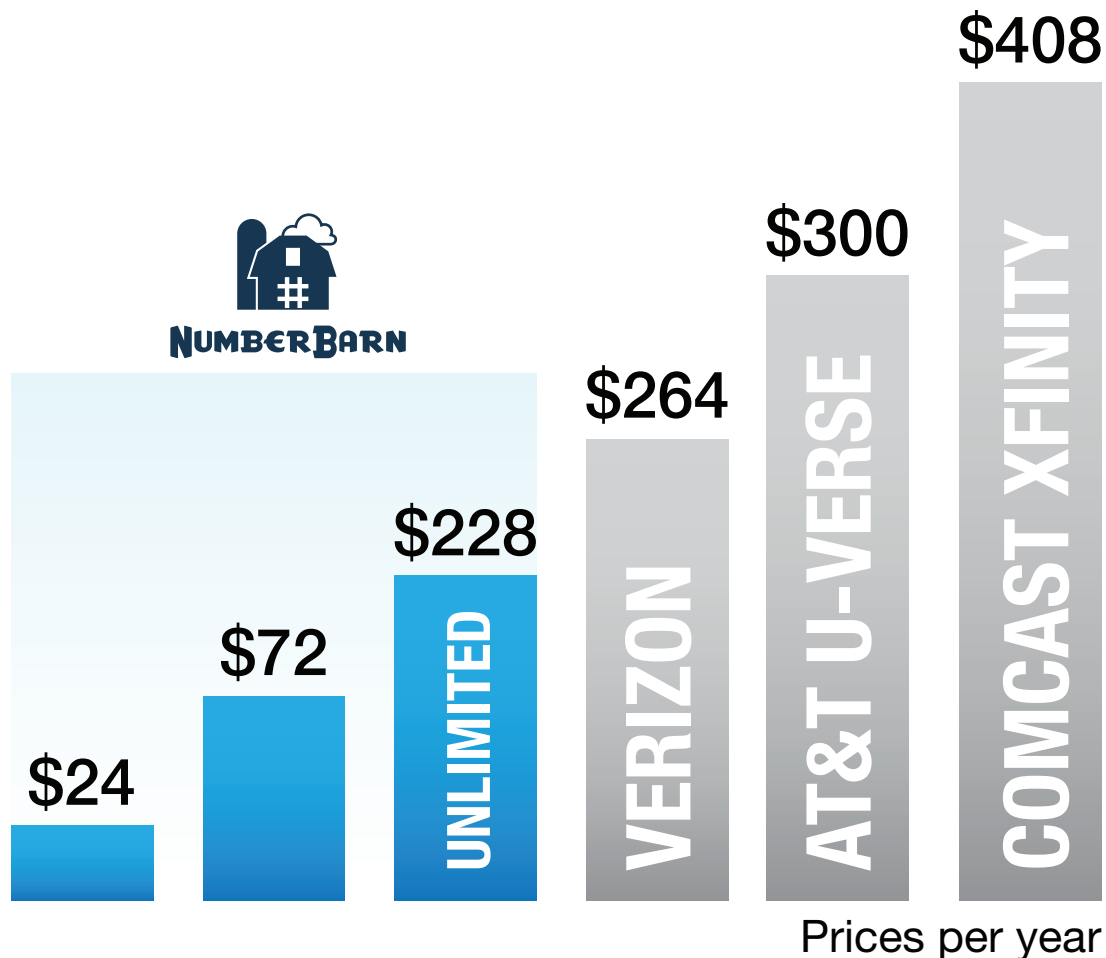

Local Number Portability:
You are legally able to keep your phone number when you move or change phone companies.

Porting your number doesn't mean you have to setup an expensive new phone service. Services like NumberBarn allow you to simply "park" your number at a very minimal monthly rate and save it indefinitely. When the time comes, you can activate your number and setup a more traditional phone service.

Want to Save \$300+ a Year?

By switching your old landline phone number to NumberBarn, you can lower your phone bill by as much as \$300 a year! For as little as 25¢ a day, our service allows you to add and consolidate numbers, stay connected and save your hard earned money.

*prices as of 12/2014 and taken from each provider's website.

Practical solutions for everyday situations

Phone number management with NumberBarn is an inexpensive and no-risk answer. Find out below how we can help you save money, manage contacts and become number smart.

Protect Your Privacy

You use your phone number to communicate with friends, family, co-workers and even use it as a contact for services and businesses such as the local pharmacy. What happens when you cancel or switch that service and lose your number? Those calls, texts and personal contacts continue to reach that old phone number. And when that number is reissued, a new phone subscriber now has easy access that personal information.

Transfer that number to NumberBarn and for \$2 a month, you can “park it” and safely store it until you are ready to reactivate it. Or if you wish to maintain active service, setup notifications that allow callers to leave you a voicemail that gets delivered to your email.

Moving Across Country

Moving across the country or going on a temporary leave? Not sure when or where you'll need service for that number? Don't just cancel your phone service and lose your number. Or worse, pay your provider's outrageous parking and activation fees. Park your old number and safely store it with NumberBarn. You can easily transfer it out to any provider you wish after your move, or upgrade your plan with us for free.

Business Startup

With most business startups, phone service is generally over looked. Setting up a new toll free number and incoming line can seem like a task for a more established business. This assignment and the overall cost of this new business line often outweighs the benefits and the solution is to use personal cell phones. But when the business grows and call volume increases, your cell number is the public-facing communications line. Do you give up your number and get a new one for personal use, or

get a new business number and give up your existing branding?

NumberBarn offers a no-risk toll free business line with simple setup, instant activation and low cost monthly service. Without breaking your budget, get a new toll free number for less than 25¢ a day and forward calls to your cell phone. That's right, a business toll free number that simply forwards to your existing phone and can be transferred and upgraded at any time. A no risk option that keeps your costs down, can be modified, upgraded or canceled if needed and gives your business instant credibility.

Keep your personal phone number private, establish a credible business identity and keep your costs low. All with NumberBarn.

Craigslist Seller

We've all been there: wanting to post something for sale online only to receive phone calls well after the item has been sold. If you have ever tried to sell something online, but didn't want a flood of calls pouring into your home or mobile phone, you're not alone. You're trying to make some extra cash, not become an information hotline. Protect your privacy during and after the sales process with NumberBarn.

NumberBarn meets your number needs by providing junk numbers. The number isn't really junk, and it's of tremendous value to you as it protects your safety and privacy. You can hand it out or post it online without any ramifications knowing that your personal number is protected from public view. To insure your privacy protection, you can also monitor it's usage and even park the number or switch it to our notification plan to prevent annoying calls after the sale is over.

Online research shows that 62% of Craigslist ads have a phone number listed, and we've all heard the stories of Craigslist transactions gone bad. However, scams, harassment, and refund demands can all be prevented by being number smart with a new number from NumberBarn. Most of the time things go smoothly, but there's always a chance something could go wrong. So why take the chance? Don't list your personal phone number, list a junk number from NumberBarn.

Job Hunter

In this modern-era of mobility, people are constantly relocating, job-hunting and trying to settle into new settings. If you've recently picked up and moved, or looking to transition from one job to the next, NumberBarn can help manage your job search without the harassing phone calls.

NumberBarn will provide a catch-all number for those job leads, so you don't have to post your personal number around town. Stop giving out your number to strangers on your resume or handing out your cell number to head hunters that harass you well after you've landed the job-of-a-lifetime.

Job hunting and change is hard enough. Leave the harassing phone calls to us. NumberBarn lets you monitor calls with our notify plan or protect your identity with call forwarding. You're smart enough to find another job and follow your dreams. Now let NumberBarn make you number smart in your new job.

Canceling Old Phone Service

How many times have you wanted to cancel that unused home landline phone service? How much money is wasted every month to receive telemarketer calls during dinner? You already manage your contacts with your mobile phone, so that landline is slowly becoming a waste of money each month. Canceling instantly saves you at least \$30/month, but what happens to your number? It goes back into the pool of available numbers your old provider gives out. What happens to the

legitimate calls you may receive? That's right. In short time, that number you've owned for years is now going to a stranger. That stranger is now getting your calls too. What about all the friends, schools, services, programs and loyalty cards that you've signed up for over the past years! Do you want to lose your number and have to notify every person and organization that your number has changed?

Simply transferring your number to NumberBarn before you cancel your existing service lets you keep your number. You have the option to:

- Park your number and save it for activation later.
- Send callers to voicemail and receive notifications.
- Forward incoming calls to a new phone number.

Smart People, Smart Phones, Smart Numbers

Up until the advent of cell phones, smart phones, and mobile telecommunications, we associated numbers with lines and figured we needed a separate number for every type of call. That was still true even a few years ago, but now we're smart people with smart phones and it's time we had smart numbers.
